

STARARCH MONSTERS

Review

Tibor Basletić Požar

Team Croatia

The problem

- A water suspension of starch is placed on a loudspeaker. Investigate and describe the resulting starch monsters.

The Reporter

Good

- Plenty of experiments
- The phenomenon was explained, concluding the problem

Not very good 😊

- Too much reading, not introduced to problem completely
- No charts explaining/showing dependence of Db on size/number of formed monsters
- Frequency was plain incorrect

The Opponent

Good

- Questions quality of parameters
- Pointed out lack of theory

Not very good 😊

- Doesn't focus on whether the problem was solved, rather asks about the parameters

Conclusion

- The presentation was well made, but the explanation was not complete. Representer could have questioned more parameters than he did
- The opponent pointed out nicely how the theory was lacking, but failed to see the experiment could have had a lot more parameters
