

Review for the solution of the problem №12

# «Structure of a hair»

---

TEAM « VORONEZH-1 »

REVIEWER:

PATRITSKAYA ANNA

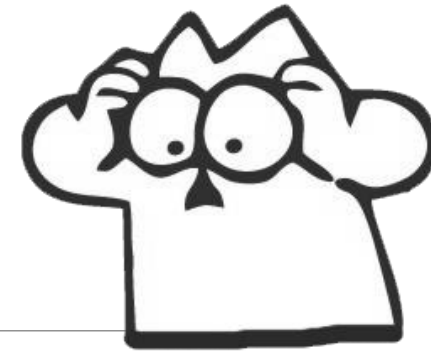

# Problem

---

The hair of various animals may significantly differ in their structure. What are these differences and how can you explain them?

# Pros and cons

---

## Pros

- Explain structure of the hairs
- Named types of cuticula scales
- Named types of pigments
- Identify factors, which influences on the color of animals fur
- Makes experiment with dogs (which live outside and at home) fur, tiger's fur and cats fur

## Cons

- Experimental base is not full
- There is no conclusions from experiments

# Review of the work done by opponent

---

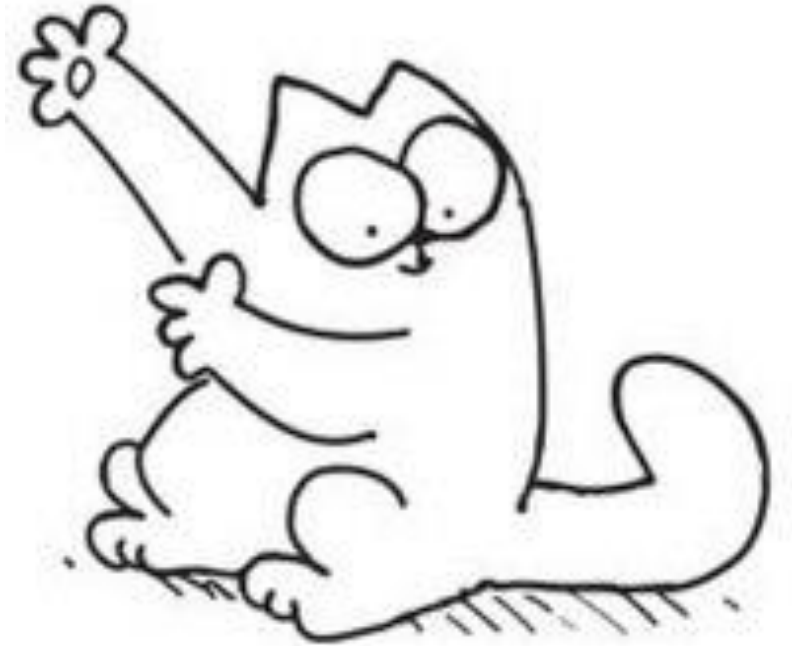

Pros :

Interesting question about

Make full observe of presentation and reporters work

Cons :

Only asked question but didn't say his own opinion

# Discussion

---

Question: What types of hair exist?

Reporter: named all types  
of hairs

Opponent: doesn't say

Our opinion: down hairs,  
ground hairs, coating  
hairs

# Discussion

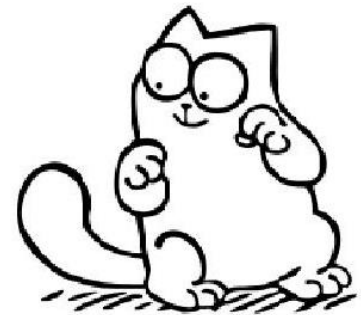

---

Question: Which facilities does each type perform?

Reporter: down hairs can protect from coldness, ground hairs protect from injured, coldness and heat

Opponent: doesn't say

our: agree

# Discussion

---

Question: Do hair of predators and herbivore differ from each other?

Reporter: depends on the type of animal

Opponent: doesn't say

Our opinion: predators' hairs often harder than herbivores hairs

---

Thank for attention!
